State Level Seminar on "Graph Theory and its Applications"	PG & Research Department of Mathematics	05.02.2019	240

Report:

In mathematics, graph theory is the study of graphs, which are mathematical structures, used to model pair wise relations between objects. A graph is this context is made up of vertices, nodes, (or) points which are connected by edges, arcs, (or) lines. A graph may be undirected, meaning that there is no distinction between the two vertices associated with each edge, (or) its edges may be directed from one vertex to another.

Comprehending its importance, the PG & Research Department of Mathematics conducted a one-day State Level Seminar on "Graph Theory and its Applications" on 05.02.2019. Dr.T. Ramachandran, Head, Department of Mathematics, M.V.M. Govt. Arts College for Women, Dindigul delivered the Keynote Address. The various topics discussed in the papers, presented by the participants were 'Flow of computation, mobile phone networks (GSM) (Grouped Special Mobile), Networks of Communications, Data organization, Coloring of Map, Shortest path in road (or) a network, Google maps, Family tree, Electrical engineering- Designing of circuit connections, Parsing of a language tree, and grammar of a language tree, Lexical semantics, Method of phonology (ex, Theory of optimality which use lattice graphs), Morphonology etc.
